DEVOPS ENGINEER

Location: Belfast

Overview

Vela is a leading independent provider of trading and market access technology for global multi-asset electronic trading. Our software enables clients to rapidly access global liquidity, markets, and data sources for superior execution. We help firms successfully differentiate and innovate in an ever-changing, increasingly-regulated and fiercely-competitive landscape, while also reducing total cost of ownership.

Vela's ticker plant, execution gateways, trading platform, and risk and analytics software deliver a unique, ultra-low latency technology stack to simplify and streamline electronic trading. We leverage the latest innovations in technology to deliver cutting-edge performance, features and reliability. Our modular stack provides access to a comprehensive set of trading, data and risk APIs and can be delivered as-a-Service from multiple co-location data centers globally.

With access to more than 250 venues, Vela provides global coverage across all major asset classes. Clients are supported by an award-winning team of technical and business experts available 24x7 from our multiple offices in the US, Europe, and Asia. Vela's clients include traders, market makers, brokers, banks, investment firms, exchanges, and other market participants.

Key Accountabilities

- Work with the VP Engineering to develop automated end-to-end solutions to support all stages from software development to delivery.
- Contribute towards our transition from traditional software development to embrace latest CI/CD best practices.
- Create or implement off shelf tooling to push towards the automation of our software development life cycle including design, implementation, testing, installation and support.
- Support the build and release function across multiple products and languages

Knowledge, Skills & Experience Required

Essential:

- Experience in the software development life cycle from design, implementation, through testing and integration
- Experience with Continuous Integration and Test Frameworks e.g. Jenkins, Teamcity & Junit
- Experience working with or on Virtual Machines (oVirt / KVM / EC2)
- Comfortable working on a UNIX platform (Linux or Solaris)

JOB OPPORTUNITY

VELA
