

LEAD SOFTWARE ENGINEER

Overview

SR Labs provides high-performance global trading platforms, through innovative market-leading software, market data and a low-latency secure networked community. We are now seeking to recruit a Lead Software Engineer in New York.

SR Labs provide a range of enterprise level products and solutions for commercial clients such as Tier 1 investment banks, global hedge funds and other international exchanges. Our company has a broad and diverse product portfolio where our core strength centres on innovation and technology.

Job Profile

- Manage and lead a team of software engineers who are responsible for the full software lifecycle: design, develop, implementation, testing, installation and support.
- Manage successful completion of software verification/ validation activities within boundaries of quality and time.
- Provide leadership and mentoring of technical team members on the use of chosen technologies and implementation methods, per current and emerging industry trends and standards.
- Manage a variety of complex issues in associated projects, plans/schedules implementation of test activities.
- Responsible for defining scope of work for test team.
- Approve protocols/support documentation (engineering change requests, system change forms, etc.) in order to secure project release.
- Proactively/regularly communicate with regions to update development progress and maintain region support.
- Manage client facing project plans.
- Conduct performance reviews on junior staff.

Requirements

- Master's degree in Computer Science, Software Engineering, Electronic Engineering or related
- 3 years of relevant experience of which must include 2 years' experience with C/C++ and Java within FIX/FASTFIX and Market Data protocols.
