SENIOR DEVELOPER

Overview

Vela is an independent global leader in high performance trading and market data technology. We provide the breadth of coverage and depth of expertise demanded by today's multi-asset, multi-region electronic trading environment.

Our clients benefit from white-glove global customer support and professional services from an experienced team comprised of seasoned financial services industry experts and cutting edge technologists. We have a proven track record of powering big banks, small trading shops, financial information firms, trading venues and everything in between.

Our products empower clients to focus on their core business strengths, leveraging their trading infrastructure by relying on our technology, expertise and experience. For more information, please visit us at velatradingtech.com.

Job Profile

As a Senior Data Pipeline Developer you will be part of a multi-disciplinary team that is responsible for helping to architect and develop a new data centric platform and products to consume, process and display large amounts of data.

- Design, develop and deliver a new data pipeline platform and products that leverage it
- Contribute to product delivery and end to end software development
- Interact with multiple stakeholders spanning Software Development, Testing and Client Support teams
- Working as part of an agile environment with regular scrums and sprints

Key Accountabilities

- Contribute to the software development lifecycle including design, implementation, testing, installation and support
- Proactively manage own tasks and projects to agreed deadlines
- Adopt and provide feedback on best practices across development teams in conjunction with Senior Engineers. For example, coding standards, tool usage and design

- Collaborate with team members to identify innovative ways to improve practices and procedures
- Strong client focus, with an emphasis on issue resolution in line with service-level agreements

Knowledge, Skills & Experience required:

Essential:

- Strong SQL experience
- Experience in deployment and configuration of at least on RMDS
- Strong experience with at least one ORM technology (e.g. Hibernate, SQLAlchemy)
- Commercial experience in Python
- Excellent problem solving and analytical abilities
- Demonstrable ability to work as a self-starter requiring limited supervision
- Proven track record of exceptional performance, high productivity and meeting deadlines
- Ability to multitask and prioritize responsibilities

Academic/Technical:

- A minimum of a bachelor's degree in Computer Science, Software Engineering or a related field
- Experience in the software development lifecycle from design, implementation through testing and integration
- Understands the implications of code changes and feature enhancements
- Capable of concisely communicating designs, code and applications to a client-facing standard
- Experience in adopting and providing feedback on new processes/technologies within teams
- Contribute to technical aspects of project delivery, planning and risk management

Desirable:

- Previous experience with a commercial or open source data pipe line tool
- Previous experience with a data warehouse product
- Previous experience with a business intelligence package
- Experience with Jenkins for continuous integration
- Development experience with languages such as Java, C#

- Previous experience with automation (build environments and Regression testing) alongside experience of scripting languages, in particular Python, used within Continuous Integration and Test Frameworks.
